RHF pressure test: radial response and energies (51/56 checked pairs)
C0 valence s
C0 valence p
⟨r⟩ (a0)
MACE
Free
C-C separation (Angstrom)
E(R) − E(R0) (kcal/mol)
E_MACE − E_free (kcal/mol)
Missing or unconverged pairs remain gaps; no interpolation across failed points.
Energy curves use their own initial reference. Large-R RHF is not the physical dissociation limit.
