Logarithmic energy trends: complete online epochs 5-596
Gap to the lowest observed online epoch mean
$E_k - E_{\text{lowest recorded}}$ (mEh / molecule; log scale)
Reference: epoch 596. Zero gap excluded, without an epsilon floor.
This empirical reference is not a known converged energy or basis-set limit.
Magnitude and sign of consecutive-epoch changes
$|E_k - E_{k-1}|$ (mEh / molecule; log scale)
Energy decreased
Energy increased
20-epoch median absolute change
Epoch
Only consecutive, complete 500-sample online records are compared. No log of a negative absolute total energy.
Individual epoch rises are retained; no monotone envelope or exponential convergence fit is imposed.
