

Grid convergence of TF + λ vW energies

—●— $\lambda = 1$ —■— $\lambda = 1/5$ -▲- $\lambda = 1/9$

(a) Al · fcc

(b) Mg · hcp

Successive GradSCF energies at fixed cell. TF + λ vW / OEPP / PZ-LDA; Mg uses ideal c/a.
Dashed line: comparison scale of 0.1 meV/atom. A successive difference is not a rigorous discretization-error bound.
