

Planar density profiles for TF + λvW

$\lambda = 1$ $\lambda = 1/5$ $\lambda = 1/9$ GradSCF O DFTpy

(a) Al · planar mean density

(b) Mg · planar mean density

Planar mean over fractional v, w at each u , on the same $0.18 \text{ \AA}$ target mesh. Lines join measured mesh points.
The lower panels resolve differences hidden by the overlaid density curves. Different λ values define different kinetic functionals.
